

The 8 MAJOR POINTS of the Fundamental Bias & Falsehoods of Ordinary Materialistic Science are:

NUMBER 1 – It is Based on a Biased & False Epistemology.

Ordinary Materialistic Science –with Physics as its basis– has been applying an Epistemology (= the fundamental Methodology how they come to what is called “science”) that is biased and false.

The reason why it is biased and false is because it is 100% based on the Epistemology of Immanuel Kant, which has **Two Fundamentally Biased and Unproven Presuppositions**:

The 1st Presupposition says: “*We need **other** means of gaining knowledge **besides Experience**”.*

The 2nd Presupposition says: “*All knowledge gained through **Experience** is **only approximately valid**”.*

But Kant does not prove either statement, and simply assumes it as philosophical dogma and only inquires under what conditions they are valid.

But before having investigated anything -including experience- so prior to any knowledge and without providing any proof, you cannot simply exclude and limit experience off the bat in any way! You need to investigate it first!

These Two Biased and False Presuppositions also show a fear and distrust of human observations and experience. Through embracing this rationale has Ordinary Materialistic Science has come up with its scientific research set-up of “Falsification” (see Nr. 3) instead of a more logic approach of “Verification”.

NUMBER 2 – It Assumes that the application of “Only the Intellect” is *the* way to obtain Truthful Knowledge, while the Intellect is only usable to gather information & define a First Analysis and not to draw Definitive Final Conclusions with. This results in adhering to a Sheer Materialist Worldview.

Nr. 2 of Fundamental Falsehoods – that is upheld by the Two Biased & False Presuppositions of Number 1 – is that Ordinary Materialistic Science only uses intellectual thinking. Scientists have thus locked themselves into using their Ego (our “director” in all we do and in the life we lead, who is in charge and makes decisions) in a “**Tag-Team of the Ego with Only the Intellect**”.

But, the Intellect is actually a tool of Observation and Discernment, a master at analyzing, identifying, siphoning off, singling out and isolating up to the smallest distinct element to investigate and decipher it. This then has resulted in the fundamental method of “Quantifying phenomena”, viz. the “Measure, Count and Weigh it”.

As such, it generates descriptions of what occurs with phenomena. It maps out information in Concepts: facts & data, resulting in representations, rationales & analysis; in “certain consequences”.

So, we definitely require the Intellect as a tool to grasp the physical phenomena surrounding us in the Physical World. Therefore, we need to master the skills of the Intellect to find our way and **bring pragmatic order in our lives and the Physical World**.

However, the properties of the Intellect show it can only provide us with a First Assessment & Analysis of Phenomena and not with Definitive Final Conclusions, nor with Truthful Knowledge.

But by assuming that Intellectual thinking is *the Only Way* how thinking can proceed and that it is the ultimate and Only tool that will provide us with Truthful Knowledge, thinking is boxed into a **Labyrinth that consists of Only the Physical World**.

And so it also assumes it is justified that its thinking can only consist of thoughts that correspond with a Sheer Materialistic Worldview, which only assumes the phenomena it “sees” or perceives with the 5 physical senses to be actually real.

NUMBER 3 – A Biased & False Research Set-up of Only Quantification and Falsification enabling Random Assumptions, Doctoring & Manipulation.

So equipped with the “Fundamentals of a Biased and False Epistemology” (Nr. 1) and a “Tag-Team of the Ego & Only the Intellect and the presumed Sheer Materialistic Worldview” (Nr. 2), Ordinary Materialistic Science has subsequently produced a Biased and False Scientific Research Set-up of Quantification & Falsification, that goes like this:

1. The researcher takes a detached position from the Phenomenon in order to obtain “objectivity” and a minimized connection with the phenomenon (a “false and presupposed objectivity” because it is based on Nr. 1 that dictates that experience is excluded);
2. Then the researcher uses his Intellect to formulate his/her own (viz. randomly rationalized) hypothesis as well as the “Boundaries of Possibility” for the phenomenon to occur in;
3. An experimental design (laboratories etc.) is created to run more tests whereby it takes the phenomenon out of its context, logical meaning and reason for it to be there (raison d’être), and thus it can only show partialities. And because its methodology only pursues to explain (with the intellect) the phenomenon out of the physical 5 senses (Nr. 2) the actual logical meaning and reason for the phenomenon to be there is lost;
4. Then all gathered data that occur are squeezed into Quantifications;
5. Those Quantifications are subjected to the Statistical Test of Science (the “Measure, Count and Weigh”) to “demonstrate” they do indeed fall within that hypothesis in order to check if they would comply with the presumed and required “Objective Scientific Standard”;
6. As long as the hypothesis is not Falsified (meaning it is “Not Not-True”) **by anybody or by anything**, that Hypothesis is simply considered to be true and “earns” the “Label of being Science”.

And in case any social and psychological phenomena occur in the form of “qualities” those discrepancies are bridged by simply forcing and squeezing them into that same “number ratio approach” of science –i.e. Quantified– so they can comply with its “scientific objectivity”.

So, a researcher can draw up any kind of Hypotheses (incl. [future] Projections) and “Boundaries of Possibility”. The researcher can also “*adjust*” those as much as he/she wants to. This opens the door wide open to the enabling of random assumptions, doctoring and manipulation.

NUMBER 4 – It Assumes those “proven” (not-falsified) Hypothesis (Nr. 3) can All be Projected onto Reality, resulting into a Mere Materialistic Paradigm of Life, Reality & Humanity.

Thus, the applied Biased and False Epistemology and Research Set-up (nr. 1), the Ego & Intellect Only Tag-Team and its Sheer Materialistic Worldview (Nr. 2) and the Rationalized Hypothesis (Nr. 3) are therefore automatically based on a total limitation in their scope to only the Physical World, making it one-Sided.

The self-imposed Biased Exclusion of Experience by Kant (Nr. 1) results in that thinking is surrendered to working with the materialistic, rational and abstracted concepts of “Only the Intellect”. Thus, it has generated concepts, rationales and theories by the trillions, but the World remains foreign in the eyes of Ordinary Materialistic Science and still does not really makes any sense to them. And so Life to Ordinary Materialistic Science all seems kind of random, coincidental and pointless.

Thus, by this limited scope of the Physical World Only a Worldview is abstracted that is also only related to the Contemporary Behavior of Matter and the therein working forces. And so, partially observed physical phenomena are projected on other realms of reality, like that of the speed of light when it falls within matter, which is then projected on Space in the Universe. The fundamentals of Ordinary Materialistic Science therefore likewise omit –and thus cannot arrive at– any logic, sensible, consistent, nor any truthful, Perspective of Time.

An example is also that within the scientific community there are two different assumptions about the Big Bang Theory; one says it went very slow, the other says it went very fast. Besides that they say our Universe was created by this Big Bang 13,4 billion years ago, but then they found stars that are 13,7 billion years old.

NUMBER 5 – It Ignores & Denies Qualities, incl. of our Soul, Spirit and the Spiritual World.

What is outlined previously in Numbers 1-4 shows it ignores, denies and omits **Qualities**. Thus, it also completely ignores & denies beforehand the Existence and Nature of our Soul, our Spirit and of the possibility of a Spiritual World.

This also generates a complete lack of a clear and objective connection of the Soul and Spirit of the “scientific researcher” him/herself with the phenomena he/she is investigating, because a real and actual experience of the researcher is not allowed, nor deemed “scientifically” relevant. And thus such a “scientific researcher” is actually not able at all to exert and apply his/her own sense of and feeling for truth, reason, logic, sense of morality, or intuition, regarding the researched phenomena.

Obviously the ignoring and denial is caused by its Sheer Materialistic Worldview, its Biased Methodology and the Intellect, allegedly because they cannot “see” the soul and the spirit. Why then do they accept that we “think”, while our thoughts are not visible either? And why not also accept our feelings? We can’t see those either, but nobody will deny they have them.

Thus, since Science does not accept and attribute the same degree of reality to our feelings, our Soul and our Spirit (viz. to Experience) it is therefore limited, superficial and lacks the full and coherent integration of all realities, viz. Quantities **and** Qualities occurring on a Physical, Soul and Spiritual level.

NUMBER 6 – It has not provided Any Answers regarding the Mysteries & Meaning of Life.

As outlined in Numbers 1-5 Ordinary Materialistic Science unjustifiably presupposes it can simply ignore and deny the Existence of the Spiritual World, and the Nature of the Human Soul & Spirit. However, it still has not produced any Definite Unambiguous Fully Coherent and Truthful answers nor any Explanation or Ideas regarding the FIVE most fundamental questions of Life:

1. HOW did Life come about? (Regarding the two contradicting big bang-theories it cannot tell who or what started it, just more assumptions)
2. WHERE do Humans come from and HOW did we come about? (They say we come from the monkeys, but why are there no more monkeys becoming human then?)
3. WHY are WE here and WHAT is the Meaning of Life?
4. HOW does our Soul, our Spirit, Spirituality and Religion fit into Human’s Existence?
5. Is there Life after Death? If no, how do you know? If yes, what is it like?

NUMBER 7 – It’s Merely a “Self-Sustaining Belief System”.

So, Science actually confronts us with this: It has a Biased and False Epistemology and Research Set-up, and with these fundamentals and all its rationalized results of intellectual data-collection it simply labels those as “science”, while ignoring and denying the Qualities of human experience, of our soul and spirit and advocating to Humanity its Paradigm and Materialistic Worldview.

This obviously can only but lead to a limited, distorted, abstract and Untrue Worldview, View of Life, of Reality and of Humanity. Thus, Ordinary Materialistic Science cannot be “Logic”, “Full Fledge”, “Coherent”, “Truthful” and it “Totally Lacks Reason”.

To a certain degree it consists of **a form of Cognition**, and so it can result in physical **pragmatic technologies and applications** (cars etc.). Those are useful, but this Cognition is NOT Knowledge by far!

But in and by itself, it is just a **Mere Self-Sustaining Belief System**, a limited conviction and view, viz. a rationalized and biased Materialistic Worldview dictated to humanity as the “truth”.

NUMBER 8 – Its developed Policies, Prognostications, Projections and Technologies lack Fully Integrated, Coherent, Logic, Moral, Soul and Spiritual Assessments & Verifications.

So we are confronted with this Bias & Falsehoods of Ordinary Materialistic Science as outlined in Numbers 1-7.

Obviously this has been causing many problems. Especially in the case of political parties, organizations and businesses fully endorsing it, developing and embracing corresponding Theoretical Principles, Theoretical Future Prognostications & Projections and Pragmatic Applications in Political Policies and Technologies.

The Issue is those Policies and Technologies **lack the fully integrated and Coherent Assessment of both Quantities and Qualities on a Physical, Soul and Spiritual level** whether a Policy or Technology will actually be benevolent, responsible, healthy, and will do any good at all for Humanity.

Many malicious consequences are clearly visible all over the World in the Policies and Technologies that are applied for all kinds of bad things such as weapons, murder, totalitarian demagogues, GMO, usury, fake news and mass-manipulation, incl. all the unforeseen not beforehand researched side-affects and bad Medical Science.

General Conclusions:

These 8 POINTS show **it does Not Make Any Sense At All** to assume Ordinary Materialistic Science and all it produces as its Cognition, Data, Projections of Future Events, Policies or Technologies, would result in any Unambiguously Clarifying Truthful Statements or Conclusive Conclusions about Life, Humanity, Reality, our Body, Soul & Spirit, Spirituality, Spiritual phenomena, Religion.

So, in case Science is NOT doctored or manipulated and restrains itself from professing it is omnipresent and honestly acknowledges its limitations (the No.’s 1-7), it’s outcome in studies and cognition could be Relevant.

But **even then it will only reflect a partial aspect of Reality**, and it **should NOT dictate** our entire Life, nor the Policies and Technologies we develop.
